New trends in the economics of central banking

4-5 octobre 2021

Centre Scientifique de l'Académie Polonaise des Sciences à Paris
(en présence)

The scientific conference “New trends in the economics of central banking” was intended to provide a forum for exchange of the newest research results and methods by gathering leading European researchers in the domain. It will also be a platform disseminate the results of the project “Determinants of preferences, communication and reactivity of central banks” funded by the National Science Center realized by the team of economists from France, Ireland and Poland.

The scientific goal of the conference is a comprehensive and interdisciplinary analysis of the factors of the functioning of central banks, in particular preferences, communication and, consequently, the manner and intensity with which central banks respond to economic events, disturbances and challenges, such as financial crises, the current COVID-19 pandemic or long-term climate-change risks.

NEW TRENDS IN THE ECONOMICS OF CENTRAL BANKING

Workshop

October 18th & 19th, 2021
