

**Régis Gauvin** completed his PhD under J. A. Osborn and J. Kress in Strasbourg University (1999). After postdoctoral stays with D. Milstein in Rehovot (Israel) and with J.-M. Basset in Villeurbanne (France), he joined the CNRS as a researcher in 2002 in the Unit for Catalysis and Solid-State Chemistry, Lille University. Since 2019, he is a CNRS senior researcher in the Institut de Recherche de Chimie Paris, in Chimie ParisTech. His research interests revolve around organometallic chemistry applied to both homogeneous and supported catalysis, for small molecules and polymer synthesis with a flavour of bioresources upgrading.
